## Project Experience

### **PokeDex – API**

*Express, CSS, Handlebars, Node.js, Responsive Design*

A page based on requesting information on Pokémon or items based on its ID from multiple rest APIs. These presented in a visually pleasing way with dynamic behaviours as well as being designed for use on other media devices. A search bar is also implemented using an auto-complete plug-in to increase user accessibility.

### **Genshin Impact App**

*Express, CSS, Handlebars, Node.js, Next.js*

Genshin Impact is a game that has a unique character-building system, this app allows for players of the game to visually plan these build paths based on information I have extracted from google sheet text guides using a google-sheets-API. Using a draggable plug-in I have created a drag and drop grid that allows for specific items to be placed into certain grid sections as well as the necessary text areas and buttons. I am currently working on converting this app onto Next.js while utilising its server side API calling capabilities.

### **Personal Portfolio**

*React, CSS, JEST, Responsive Design*

A personal portfolio website that was created using a multiple of packages to cater to the user experience. I incorporated media queries allowing for a responsive view across all devices and briefly used JEST on website.

### **Eat Saigon Website**

*React, CSS, Responsive Design*

A website created for a family restaurant, different packages were used to increase user friendliness. As this is the type of website that would often be accessed via phones responsive design was a priority during the coding of the website. Included various images in a sleek design as well as using embedded google map links.

### **E-commerce Site**

*React, CSS, Commerse.js, Stripe, Responsive Design.*

Using commerce.js and stripe I created a fully functioning e-commerce website with manually inputted items via commerce.js Using material-ui I created an extremely responsive design. Due to the complexity of this code, with numerous amounts of promises and interlinking components, it ranks highly among my favourite personal projects.

## Skills

HTML, CSS, JavaScript, C#  
React, Next.js, Express and Node.js  
ASP.net and SQL

## Languages

English  
Vietnamese  
Korean

Native  
Fluent  
Conversation Proficiency

## Education

### University of Birmingham

Birmingham, United Kingdom

MSci (Chemistry w/ Study Abroad)

2016-2020

Degree Level: **Class II (Division I)**

### Korea University

Seoul, South Korea

Year of Study Abroad

2018-2019

Overall Grade: **Class II (Division I)**

### Abbeyfield School

Northampton, United Kingdom

6th Form and Secondary School

2009-2016

A-Levels: Maths: **A**, Chemistry: **B**, Further Maths: **B**, Extended Project: **A**

## Leadership and Volunteering

### Korea University Buddy Assistant

Seoul, South Korea

- Responsible for organising and planning social events to introduce Korean Culture to incoming exchange students.
- Took part in the leadership of a group of 100+ students by being the representative member of a group within the large company.
