Project Experience

PokeDex – API
Express, CSS, Handlebars, Node.js, Responsive Design

A page based on requesting information on Pokémon or items based on its ID from multiple rest APIs. These presented in a visually pleasing way with dynamic behaviours as well as being designed for use on other media devices. A search bar is also implemented using an auto-complete plug-in to increase user accessibility.

Genshin Impact App
Express, CSS, Handlebars, Node.js, Next.js

Genshin Impact is a game that has a unique character-building system, this app allows for players of the game to visually plan these build paths based on information I have extracted form google sheet text guides using a google-sheets-API. Using a draggable plug-in I have created a drag and drop grid that allows for specific items to be places into certain grid sections as well as the necessary text areas and buttons. I created two versions one on express, and one on Next.js.

Personal Portfolio
React, CSS, JEST, Responsive Design

A personal portfolio website that was created using a multiple of packages to cater to the user experience. I incorporated media queries allowing for a responsive view across all devices and briefly used JEST on website.

Eat Saigon Website
React, CSS, Responsive Design

A website created for a family restaurant, different packages were used to increase user friendliness. As this is the type of website that would often be accessed via phones responsive design was a priority during the coding of the website. Included various images in a sleek design as well as using embedded google map links.

E-commerce Site
React, CSS, Commerse.js, Stripe, Responsive Design.

Using commerse.js and stripe I created a fully functioning e-commerce website with manually inputted items via commerse.js Using material-ui I created an extremely responsive design. Due to the complexity of this code, with numerous amounts of promises and interlinking components, it ranks highly among my favourite personal projects.

Skills

HTML, CSS, JavaScript, C#
React, Next.js, Express and Node.js
ASP.net and SQL

Languages

English   Native
Vietnamese   Fluent
Korean   Conversation Proficiency

Education

University of Birmingham   **Birmingham, United Kingdom**
MSci (Chemistry w/ Study Abroad)   *2016-2020*
Degree Level: **Class II (Division I)**

Korea University   **Seoul, South Korea**
Year of Study Abroad   *2018-2019*
Overall Grade: **Class II (Division I)**

Abbeyfield School   **Northampton, United Kingdom**
6th Form and Secondary School   *2009-2016*
